SUMMARY

Detail-oriented Computer Science graduate with 20 months of professional experience in AI-assisted content review, quality operations, compliance documentation, and cross-functional coordination at a US-based healthcare technology company. Experienced in maintaining structured documentation, identifying and escalating error patterns, and working within HIPAA-aligned compliance frameworks. Comfortable in fast-paced, high-volume environments with strict accuracy and process adherence requirements. Strong written and verbal English communication skills developed through daily interaction with US-based clinical and operational stakeholders. Currently developing data analytics skills including SQL, Excel, and Power BI.

EXPERIENCE

Clinical AI Specialist	Dhaka, Bangladesh
Commure Bangladesh (<i>US-based Healthcare Technology Company</i>)	October 2024 – Present
- Reviewed and evaluated AI-generated content daily across high-complexity accounts, assessing output accuracy against defined quality standards and identifying hallucinations, omissions, and factual inconsistencies. - Monitored quality trends across assigned accounts, identified recurring error patterns, and submitted structured, evidence-based findings to QA leads to support continuous process improvement. - Authored and maintained formal Clinician Preference Guides (CPGs) — structured internal documents capturing clinician-specific workflows, documentation standards, and account requirements — used by team members as the primary reference for their accounts. - Conducted ad-hoc knowledge transfer sessions for team members on clinician-specific workflows and EHR navigation, ensuring coverage continuity and consistent output quality across accounts. - Collaborated daily with QA, Operations, and Technical teams across US and Bangladesh time zones via Slack, coordinating workflows and resolving operational issues with appropriate escalation. - Completed structured training through enterprise LMS platforms WorkRamp and eFront, covering compliance requirements, documentation standards, and platform-specific workflows. - Operated under HIPAA-aligned data privacy and security requirements, completing mandatory compliance training, signing formal agreements, and adhering to documented information security SOPs daily. - Delivered 15–50 finalized records per shift across high-complexity accounts within defined turnaround commitments, maintaining zero negative incidents, zero PIPs, and 2 formally recorded positive performance citations across 20 months of service.	

EDUCATION

B.Sc. in Computer Science	Dhaka, Bangladesh
BRAC University	2020 – 2024
CGPA: 3.50 / 4.00	
Higher Secondary Certificate (Science)	Dhaka, Bangladesh
National Ideal College	2019
GPA: 4.33 / 5.00	
Secondary School Certificate (Science)	Dhaka, Bangladesh
Ideal School & College	2017
GPA: 5.00 / 5.00	

SKILLS

AI Operations & Quality: AI-generated content review and evaluation, LLM output assessment, hallucination and omission detection, error pattern identification and escalation, quality metric monitoring, evidence-based reporting

Compliance & Documentation: HIPAA compliance (trained, certified, practiced daily), information security SOP adherence, formal internal policy and procedure documentation, audit-supporting evidence collection, knowledge asset maintenance

Data & Analytics: SQL (in progress), Microsoft Excel, Google Sheets, Power BI (in progress), data validation and quality checking, structured reporting

Enablement & Coordination: Process documentation and workflow guides, knowledge transfer delivery, training content maintenance, SOP development, cross-functional team coordination

Communication & Collaboration: Professional written and verbal English, cross-timezone stakeholder communication (US-aligned), Slack (professional), Discord, active listening and contextual comprehension

Tools & Systems: Confluence, Notion, Excel, Google Workspace, WorkRamp (LMS), eFront (LMS), Slack; academic background in JavaScript, TypeScript, React, Angular, Spring Boot, Django, and machine learning (CNNs, Explainable AI)

PROJECTS

Automated Ovarian Cancer Detection — Deep Learning & Explainable AI *(Undergraduate Thesis)*

- Designed and trained multiple CNN architectures (InceptionV3, ResNet, VGGNet, LeNet-5) for medical image classification, achieving 94% classification accuracy through structured preprocessing and hyperparameter tuning.
- Applied LIME, SHAP, and Integrated Gradients to translate complex model outputs into interpretable, clinician-readable findings — demonstrating hands-on experience evaluating and explaining AI model behavior.
- Authored complete research documentation covering methodology, model reasoning, and findings for academic and technical audiences.

Brand-Influencer Collaboration Platform

- Built a full-stack web marketplace using Angular and Spring Boot with REST APIs, secure authentication, and role-based access control.
- Documented end-to-end platform workflows and system requirements throughout development.

Online Pharmacy Platform

- Developed a Django-based e-commerce application with product, cart, and checkout workflows.
- Designed relational database schemas and implemented CRUD operations.
